

# DTEA II™

## Solid

### Slow Release Formulations – Product Benefits

DTEA II™ tablets are a solid, slow release form of DTEA II, an organic deposit penetrant, dispersant, and remover. The tablets are intended for use in small to medium circulating water systems, such as cooling towers, and closed loop cooling systems.

**Designed for smaller systems** that do not require customized treatment programs and may get minimal treatment for various reasons.

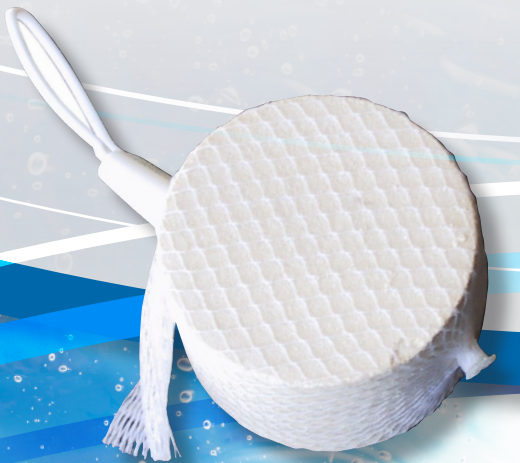

**Multifunctional performance** features (organic deposit control, mild steel & copper corrosion inhibition, scale inhibition) make the product suitable for maintenance treatment of small systems, in conjunction with a biocide.

**Easy to use** product that doesn't require special training and provides up to one-month lifetime which minimizes service visits.

**Safety:** Solid products provide minimal exposure hazards compared to liquid chemicals and can be shipped via small package carriers (like UPS).

**Reliability:** The solid tablets provide reliable protection so you can feel secure that your system is being protected while you are away (no pump failures with over/underdosing or chemical spillage to worry about).

**Provides an effective Biofilm Control Program when used in conjunction with a biocide.**

DTEA II™ SR & DTEA II™ SR Plus SC are  
Patent protected (US Patent 9,090,495)
