

Product Benefits

BCP® 6010 is a powerful organic deposit cleaner, penetrant aid, and dispersant specifically designed to be used in a continuous feed, maintenance dosing treatment program. This easy to use product works with both oxidizing and non-oxidizing biocides. Continuous cleaning action limits the build-up of bio-organic deposit on cooling water system surfaces, boosting the performance of biocide, corrosion and scale inhibitor programs. BCP® 6010 delivers it all!

Biofilm is at the Core of Heat Transfer and Corrosion Issues

Surfaces free of biofilm:

- Are less susceptible to microbially induced corrosion (MIC)
- Are more accessible to corrosion and scale inhibitors
- Are less likely to harbor pathogens such as *Legionella pneumophila*
- Provide more efficient heat transfer on exchanger surfaces

Lower Costs

- Failures cost money in replacement parts, wasted man-time and missed deadlines.
- A fouled water system slows operations, increases costs and may result in a complete system failure.
- Increased cycles of concentration (COC) allows savings on make-up water.
- BCP® 6010 limits the buildup of biofilm, allowing biocides to work effectively at the low end of their recommended use levels.
- Continually cleaned surfaces allow the maximum performance of scale and corrosion inhibitors at the low end of their recommended use levels.

Increase Efficiency

- BCP® 6010 products maintains maximum operating efficiency by continually cleaning surfaces.
- A system free from deposits allows optimum heat transfer from vital components.
- Cleaner systems run more smoothly and with increased efficiency.
- Maintaining a system with BCP® 6010 allow peace of mind that the system is continually kept clean, with a proven chemistry, and increases customer satisfaction.
- Yellow metal corrosion inhibition is enhanced by the inherent properties of BCP® 6010 to go to surfaces.

Specifically Designed for

- Continuous oxidizing biocide programs.
- Legionella control programs when used with an oxidizing biocide.
- Enhancing yellow metal corrosion inhibition.

**BCP® 6010 – An easy to use
BCP® chemistry that delivers consistent
cleaning performance!**
